

Knowledge Platform Charging solutions

Are you preparing for the increase of electric mobility? Then perhaps you should visit the Knowledge Platform Charging Solutions, which collects data, factsheets and research projects on alternative charging solutions. The platform also connects sparring partners and discussion groups.

Data and factsheets

Which data is available?

Simulation models and research reports support the analysis of how much charging infrastructure is needed in a neighbourhood. The more data, the better: predictions become more accurate and reliable.

Is this the best solution?

Assess the options for market players and city governments.

Regular meetings

Market players and research institutes share their knowledge with municipalities.

With whom do I collaborate?

Find partners to collaborate with on research and funding. It helps to avoid common causes of failure, like financial mistakes.

SparkCity simulation model

For whom?

At this platform, municipalities can ask questions and exchange ideas.

Sparring

I wish to spar on possibilities, obstacles and solutions.

Join us on

ANDERSLADEN.NL

Where can I find assistance?

Who do I contact if I have any questions on technological or regulatory developments or experiences gained from projects?

What are the standards?

Having an overview of research projects and results, what standards do we follow and which quality labels do we recognise?
